

General Specifications

Yokogawa Temperature Sensor Solutions

Temperature sensing in the process automation industry is one of the most important measurement technologies, requiring accuracy, repeatability and safety.

A comprehensive range of temperature sensors complement our YTA series head and field mounted Temperature Transmitters providing a full integrated temperature supply

Our temperature sensor solutions include Resistance Temperature Detectors (RTD's), Thermocouples (TC's), a wide selection of Thermowells and the capability to supply special engineered temperature assemblies.

Temperature Sensors

An assortment of temperature sensors are readily available. These include Resistance Temperature Detectors (RTD's) and Thermocouples (TC's) to suit all process automation applications. Wire wound RTD's represent the most common temperature sensors because of their inherent accuracy and stability, used extensively in process measurement and control.

Thermocouples deliver high temperature capability and are more vibration tolerant than RTD's. Furthermore, they can be manufactured in small diameters for asset monitoring purposes. The quality of the sensor remains essential to the overall health of your process and plant

Thermowells

Thermowells are an important part of the temperature measurement and the plant's containment solution, providing protection against potentially dangerous process mediums. Quality of design and manufacturing is essential to meet the requirements of a variety of process environments.

A correctly designed thermowell can withstand;

- Erosion
- Abrasion
- Corrosion
- High pressures and velocities
- Various mechanical stressors

Thermowells can be manufactured from barstock, forgings or tubular construction and in a variety of materials ranging from stainless steel to exotic alloys. These ensure mechanical integrity, safety and longevity.

A welded flanged thermowell can be an acceptable solution for many applications, however, a full penetration welded flanged thermowell (double "J") delivers the maximum mechanical strength for high pressure service.

Once welded and heat treated the thermowell becomes effectively a one piece construction of similar alloys. Quality assurance testing, such as; dye-penetration, X-Ray, ultrasonic and pressure testing confirm the welding process.

The ultimate thermowell is formed from a single piece of material, forging and therefore, has no welds. This is an excellent choice for high pressure, arduous process.

General information

YTE1, 2 and 3 are Temperature assemblies encompass our inclusive range of Temperature measuring solutions, providing 4-20 mA, HART and Foundation Fieldbus transmitters or RTD/TC outputs.

Yokogawa's temperature sensor model structure includes YTE 1, a part structure specifically designed for a sensor to fit an existing thermowell or supplied with a specifically designed thermowell in accordance with customer Thermowell standards or Thermowells engineered to manage hostile as well as complex process conditions.

The YTE 2 temperature sensor and thermowell model structure includes a comprehensive number of standard Thermowell options, for uncomplicated selection and faster delivery. Yokogawa's YTE 3 temperature sensor and tubular thermowell model structure is suited to less arduous lower pressure process conditions and hygienic applications.

E	Nickel-Chromium	Copper-Nickel
J	Iron	Copper-Nickel
T	Copper	Copper-Nickel

Table 3. Tolerance on Temperature (IEC 584)

Type	Tolerance class 1	Tolerance class 2
Type T		
Temperature range	-40 °C to +125 °C	-40 °C to +133 °C
Tolerance value	±0.5 °C	±1 °C
Temperature range	125 °C to 350 °C	133 °C to 350 °C
Tolerance value	±0.004 • t	±0.0075 • t
Type E		
Temperature range	-40 °C to +375 °C	-40 °C to +333 °C
Tolerance value	±1.5 °C	±2.5 °C
Temperature range	375 °C to 800 °C	333 °C to 900 °C
Tolerance value	±0.004 • t	±0.0075 • t
Type J		
Temperature range	-40 °C to 375 °C	-40 °C to +333 °C
Tolerance value	±1.5 °C	±2.5 °C
Temperature range	375 °C to 750 °C	333 °C to 750 °C
Tolerance value	±0.004 • t	±0.0075 • t
Type K, type N		
Temperature range	-40 °C to +375 °C	-40 °C to +333 °C
Tolerance value	±1.5 °C	±2.5 °C
Temperature range	375 °C to 1000 °C	333 °C to 1200 °C
Tolerance value	±0.004 • t	±0.0075 • t

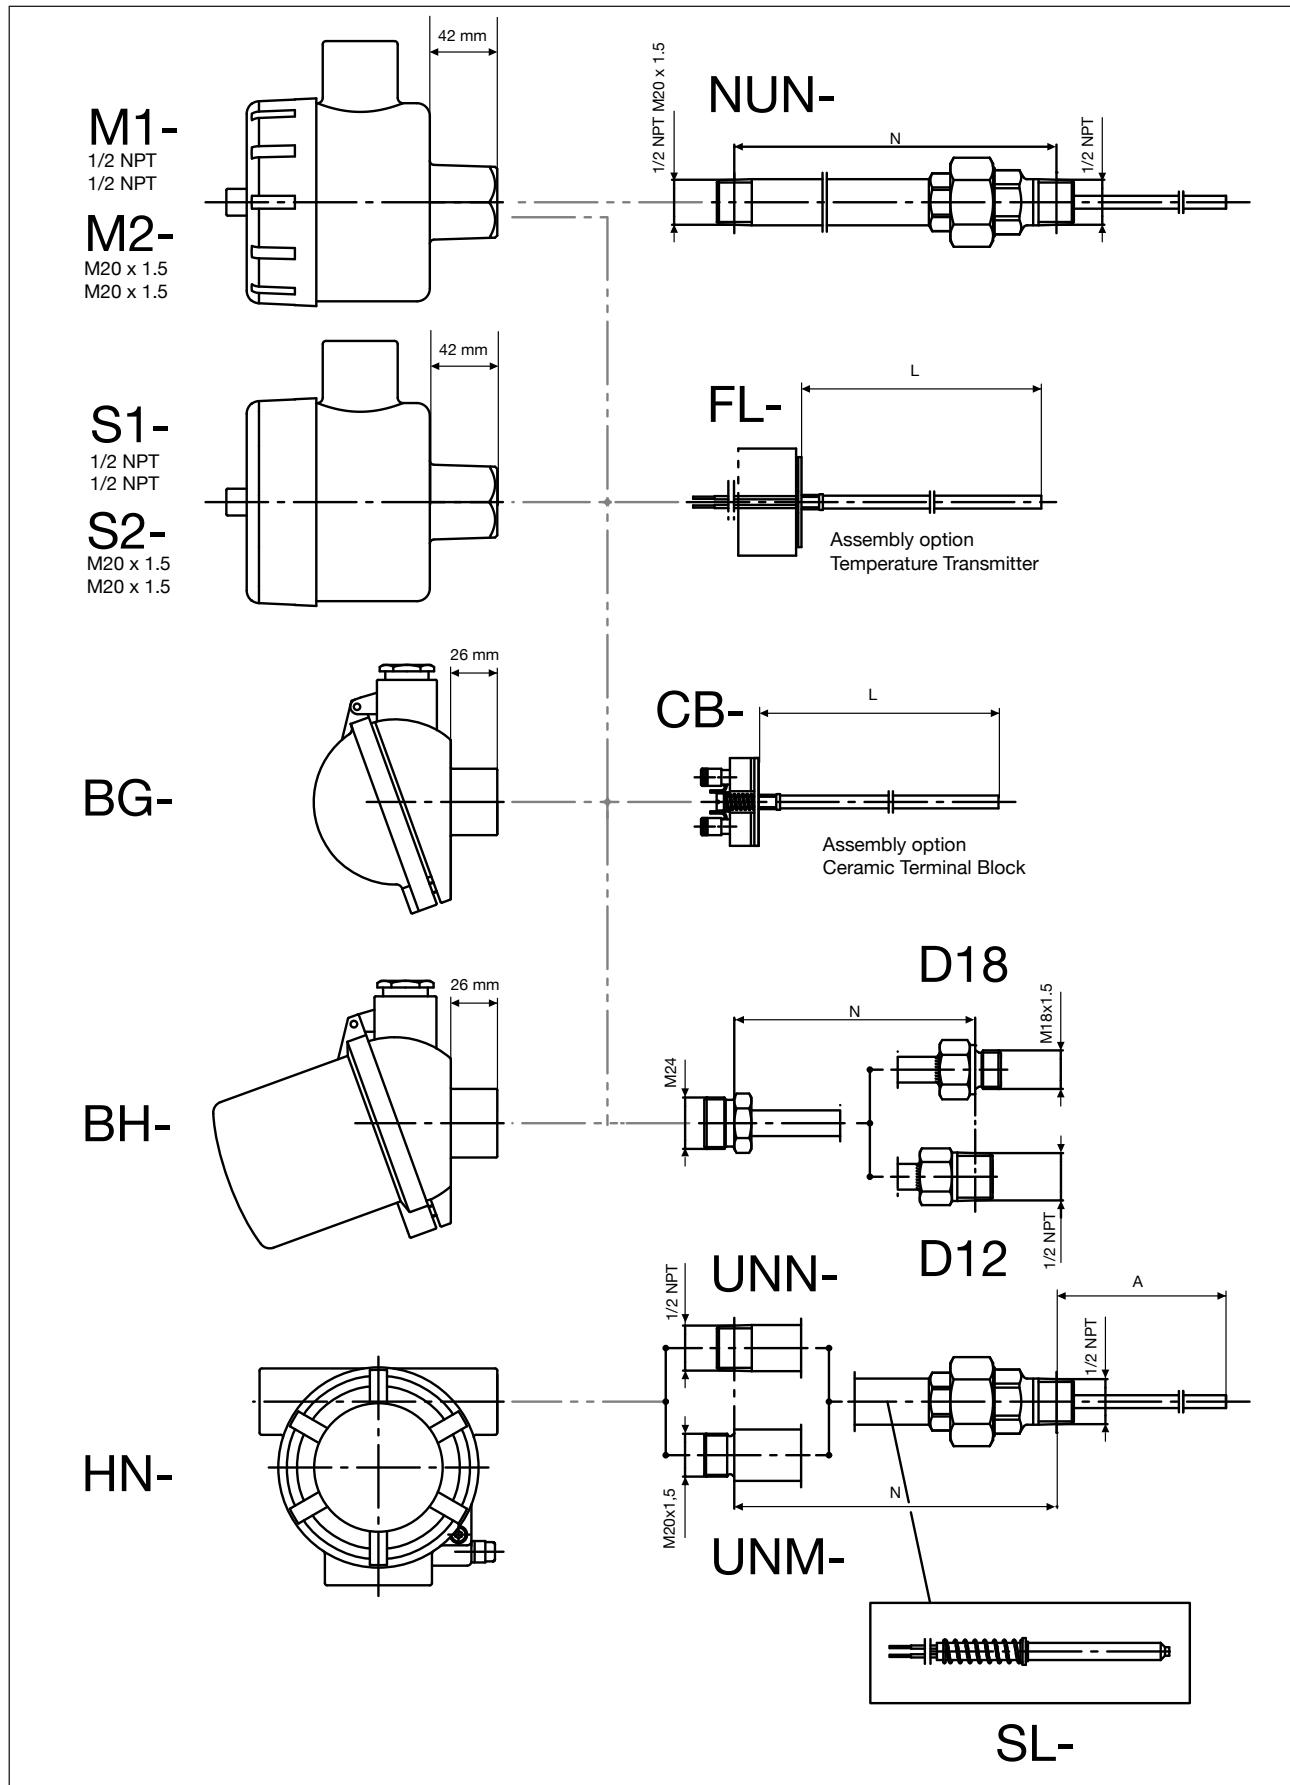

Table 4. Limits of Normal Operating Temperature and Elevated Operating Temperature.

Thermocouple type	Normal operating temperature limit *1 °C	Elevated operating temperature limit *2 °C	Thermocouple type	Normal operating temperature limit *1 °C	Elevated operating temperature limit *2 °C
K	650	850	J	400	500
	750	950		450	550
	850	1050		500	650
	900	1100		550	750
	1000	1200		600	750
E	450	500	T	200	250
	500	550		200	250
	550	650		250	300
	600	750		300	350
	700	800			

*1: Normal operating temperature limit means the limit of temperature within which thermocouples can be continuously used in the air.

*2: Elevated operating temperature limit means the limit of temperature at which thermocouples can be used for a short time in the case of unavoidable needs.
